EXPERIENCE

Founding Engineer, Scowtt

San Francisco, CA, September 2025 – Present

- Built Scowtt's **shared distributed ML infrastructure from scratch**: config-driven Vertex AI pipelines for ingestion, inference, & retraining that scale to **47 enterprise tenants**, with 10 engineers building on the join engine & CI/CD I own; **cut onboarding time by 65%** & enabled a 3× customer-count increase in 6 months.
- Engineered the fault-tolerant data plane behind \$500M+ in performance marketing spend (**100 GB/day** ingested from Salesforce, SFTP drops, and custom API pushes) and the conversion event delivery to Google, Meta, and Microsoft powering a **30% average incremental return on ad spend (ROAS) lift** across customers.
- Established the team's **Terraform IaC foundation** across AWS & GCP and co-designed the onboarding spec and workflows that auto-provisions tenants through our internal agent, cutting provisioning from 3–4 days to hours.
- Shipped **Sage**, an **LLM data-analyst agent** (DAG orchestration, self-correcting critic loop, per-tenant memory), which answers business data questions in minutes, saving 2 weeks of data discovery per new client.
- Own **platform-wide production reliability** through centralized log-based alerting, statistical anomaly detection on BigQuery baselines, and infrastructure drift detection, driving MTTR for failure classes from weeks to hours.
- Joined as **engineer #3**; as the company grew to 30, **co-managed 2 engineers**, personally onboarded all **8 ML engineers** onto the pipeline platform for their per-client deployments, and codified common workflows into knowledge bases and **LLM-executable skills** so others run them without errors.

Co-founder, CEO, Spindl

Bloomington, IN, 2021 – 2023

- Built and scaled a **crypto payments platform** to **10k+ users** and **\$50k MRR** with shareable payment pages that replaced raw wallet addresses, and supported on-chain tips and donations, NFT galleries, social links, and one-click token minting, plus an **embeddable widget** for accepting payments anywhere.
- Engineered the TypeScript & Solidity stack with support for Ethereum, Solana, & Bitcoin through pluggable per-chain transfer adapters and network guards behind one interface, wallet-signature authentication unified into a single JWT session model, server-side on-chain payment settlement, and a deployed Merkle-proof airdrop contract.

PROJECTS

Reentrant Distributed Lock Service

- Designed a fault-tolerant distributed lock manager in Python on top of an etcd cluster, supporting reentrant locks, auto-renewal, and structured logging for distributed job coordination.
- Ensured safe concurrency and job scheduling with a 3-node deployment **benchmarked at 5k+ ops/sec and under 40ms latency**. Delivered with Docker Compose setup and a 50+ test suite.

LLM-Powered Automated Podcast Clipping

- Built Clippy, an end-to-end pipeline turning podcasts into clips: WhisperX transcription, Gemini highlight selection, and active-speaker detection with smoothed face tracking for GPU reframing and caption burn-in.
- Architected the serverless backend on Modal & Inngest with durable workflows, per-user concurrency limits, preloaded models, a cached weight volume for fast cold starts on L40S GPUs, and presigned S3 uploads.

AWARDS & LEADERSHIP

Winner, Anthropic's Agents Hackathon: Built ImmunAI, red-teaming AI agents with 36 adversarial attack vectors.

Winner, Afore Capital's Software Hackathon: Built ReCode, an AI DevOps agent that self-heals production apps.

Organizer, AI+ Renaissance Conference 2026: Co-organized a marquee AI conference for 2,000+ attendees.

Herman B Wells Scholarship: Full ride four-year scholarship to IU (top 15 per year out of 12k incoming students)

EDUCATION & SKILLS

Indiana University Bloomington

B.S. Computer Science and Mathematics | GPA: 4.0

Languages & Frameworks: Python, C, C++, TypeScript, SQL, Java, HTML/CSS, React, Next.js, PyTorch

Technologies: PySpark, MLflow, AWS, Docker, Kubernetes, Git, PostgreSQL, GCP, Terraform, Vertex AI
